

Global Ozone Project Internship Opportunity

Help a local non-profit save the planet with a groundbreaking global air pollution education project!

The GO3 Foundation is looking for assistance with its primary program, the Global Ozone (GO3) Project. In the GO3 Project, students from around the world participate in global research by measuring air pollution at their schools and sharing their data on Google Earth. The project seeks to help students develop an understanding of their roles as global citizens. Additionally, GO3 students are making history by helping to create the world's first global database of ground level ozone measurements. We work primarily with high schools, but also colleges and K-8 students. To learn more about the GO3 Project, please visit our website at www.go3project.com. The number of schools participating is growing rapidly, and we need assistance with many aspects of the project, including:

- Communicating with teachers and students on the progress of their projects
- Facilitating communication and collaboration among participating schools
- Assisting teachers and students with technical questions about the project and their instrumentation
- Creating activities and curriculum for the teachers and students to complete
- Assisting with program evaluation
- Assisting with teacher professional development

The skills which would be complimentary to the position include:

- Good communication skills
- Passion and excitement for teaching and learning about air pollution and related issues
- An engineering/science/technical or education background
- Good writing skills
- Effective troubleshooting skills
- Experience with Excel and general computing programs

Although the position is unpaid, the experience obtained will be extremely beneficial for individuals seeking careers in the environmental sciences, policy or education. This is a wonderful project with a great group of people. We look forward to hearing from you and learning about your interests, to see how we can help you develop valuable skills and experience to compliment your career goals.

Please email Jessa Ellenburg at jessae@go3project.com if you are interested in this opportunity.
